

MY DMT EXTRACTION

Summer, 2015

LIST OF MATERIALS:

- * Acacia Confusa Bark 500 grams (1/2 Kilo)(2.5cups)
- * Water 2200ml/9 cups
- * Naphtha (VM & P) 500ml/2 cups
- * White 5% Vinegar 225ml/1cup
- * Non-Iodized Salt 100grams/1/2cup
- * Lye pure sodium hydroxide 300g/ca. 1-1/2cup
- * glass eye-dropper & turkey baster
- * Large Canning Jar (16-1/2cups -w- tight lid)(1.031 gal)
- * 4 baby food jars
- * freezer & stovetop
- * measuring beaker (ML)
- * scale (grams)
- * cooking pot (12-1/2 cup capacity)

STEP #1: ACIDIFICATION

- * In the pot, mix bark, water & vinegar together
- * Slow boil until reduced to ca. 5 cups liquid
- * Cool to room temperature, and leave overnight
- * Transfer liquid into canning jar

STEP #2: BASIFICATION

- * Put on eye goggles & gloves
- * Slowly (by 25 gram/2 minutes), add Lye (about 3 ½ C) to jar and contents (the mix will heat up)

STEP #3: EXTRACTION

- * While still warm, add Naphtha
- * Tightly seal jar, and gently “roll” (don’t shake) often over the next 24-48 hours.

FIRST PULL: carefully siphon-off the clear Naphtha using the baster (then the eye-dropper) and transfer the liquid into a babyfood jar. Do not get any of the darker liquid mixed in.

[NOTE: you can do the THIRD PULL here, while waiting]

* Leave in dark, cool place *at room temperature* for 12 hours (this produces the purist DMT crystals).

* Gently spoon the crystals out onto a clean piece of white paper to dry. Store the DMT crystals in a small air-tight, amber glass container.

SECOND PULL: put the same babyfood jar/naphtha into the freezer for 24 hours for more crystals.

THIRD PULL: add new naphtha back to the original bark mixture jar, and “roll” for several hours. Draw off the naphtha into a clean babyfood jar and freeze 24 hours.

FOURTH PULL: return the naphtha *from the original pull*, back into the bark mixture jar, *add 100 grams non-iodized salt*, and “roll” overnight. Draw off the naphtha into the last babyfood jar and freeze 24 hours.

Pull %'s: immediate (10-35%), wait 6-8 hours (25-60%) & wait 24-48 hours (80-90%).

Smoking: 40-50mg (50 for large man).

1 cup=130-150grams. 2lbs = 907grams.
